

Vertical Tunnel with Scale

Catalog # 42236

The Mobile vertical tunnel with scale has a frame constructed of #304 stainless steel and wall panels made of clear lexan plastic with ventilation holes. Supported by an oversized caster base frame to prevent tipping, four 5" casters and a handle make the tunnel easily maneuverable. The tunnel can be divided into lower and upper compartments with separate weigh stations that are removable. Designed to be compatible with existing caging that is in use, each compartment has a wire "snout" that securely latches to existing animal door. A removable divider in the snout provides control over the animal's movements. In addition to the removable waste pan at the base frame, a waste pan and foraging tray can replace each weigh station.

Overall Dimensions: 14" wide x 14" deep x 71-1/2" tall

Constructed of 1" and 1-1/2" square box tube

Walls are made 1/4" clear perforated lexan

2 electronic scales included
