

Marmoset Bio-Containment

Catalog # 40763

The Bio Containment Unit allows the housing of NHPs in a microbiological environment that can operate at a BSL-3 level using facility air handling equipment. Fan boxes can be provided, keeping the module independent from surrounding unit or facility air handling equipment.

All doors and opening have mechanical devices for seal compression.

Room air is drawn into the cage through a HEPA filter on the front door.

Two removable fan modules filter cage air before being exhausted back into the room.

All door and windows are made from tempered glass.

Vertical Tunnel can be removed and the openings sealed to allow Chambers to operate independently.

This unit has special doors with latches that allow passage into Tunnel on both Cages and Chambers.

Optional light source on rear of Unit to provide additional light to lower chamber.

All chambers and Cages can be custom designed and sized to best suit your needs.
